#### DETAILED ACTION

Page 2

1. This communication is in response to amendment filed 10/27/04.

### Election/Restrictions

- 2. Claims 89-108 and 121-125 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected inventions I and II, there being no allowable generic or linking claim. Election was made without traverse in the reply filed on 10/27/04.
- 3. Accordingly claims 109-120, 126 and 127 are under consideration.

#### Specification

4. The abstract of the disclosure is objected to because it contains more than 150 words (245 words). Correction is required. See MPEP § 608.01(b).

#### Claim Rejections - 35 USC § 112

5. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

- 6. Claims 109-120 and 126 are rejected under 35
- U.S.C. 112, second paragraph, as being indefinite for

Art Unit: 3624

failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

- 7. Independent claims 109, 115, 126 and 127 contain the following deficiencies.
- 8. Claim 109 recites that the originator and the bidders are coupled electronically over a communication network.

  However, this limitation does not relate to any of the method steps positively. For example, none of the limitations indicate that the action performed is over the communication network.
- 9. Furthermore, the claimed invention does not clearly indicate that the act of originator and the bidders being coupled electronically in any way relate to the originator. In the present form the process steps are carried out regardless of the electronic coupling of the bidders and the originator.
- 10. The steps "receiving bids ..for a lot" and "extending the closing time of the lot .." does not relate to the "offering at least two lots to the plurality of potential bidders..". Is the lot specified in the receiving step related to the two lots in the offering step? This ambiguity also renders the step "extending the closing

time" unclear, because the parameter "extended closing time" does not relate to any of the two lots.

- 11. It is suggested that the time sequencing of the two lots be clearly defined. For example it may be stated as a first lot (preceding lot) and a second lot (current lot) wherein the second lot is offered subsequent to the first lot. Then the bid is received for the first lot etc.
- 12. It is requested that the claim also be amended to specify which of the steps are electronically performed in the context of the "electronic auction" so as to provide support to the recitation of the preamble.
- 13. Aforementioned analysis also applies to apparatus claim 115 and dependent claims 116-120.
- 14. claim 126 recites in limitation (b) "a predefined time interval" which should read "the first predefined time interval". The limitation "the predefined minimum time interval" lack sufficient antecedent basis. Appropriate correction is required.

#### Claim Rejections - 35 USC § 101

## 15. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful

Art Unit: 3624

improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

# 16. Claims 126 and 127 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

As an initial matter, the United States Constitution under Art. I, §8, cl. 8 gave Congress the power to "[p]romote the progress of science and useful arts, by securing for limited times to authors and inventors the exclusive right to their respective writings and discoveries". In carrying out this power, Congress authorized under 35 U.S.C. §101 a grant of a patent to "[w]hoever invents or discovers any new and useful process, machine, manufacture, or composition or matter, or any new and useful improvement thereof." Therefore, a fundamental premise is that a patent is a statutorily created vehicle for Congress to confer an exclusive right to the inventors for "inventions" that promote the progress of "science and the useful arts". The phrase "technological arts" has been created and used by the courts to offer another view of the term "useful arts". See In re Musgrave, 167 USPQ (BNA) 280 (CCPA 1970). Hence, the first test of whether an invention is eligible for a patent is to determine if the invention is within the "technological arts".

Further, despite the express language of \$101, several judicially created exceptions have been established to exclude certain subject matter as being patentable subject matter covered by \$101. These exceptions include "laws of nature", "natural phenomena", and "abstract ideas". See Diamond v. Diehr, 450, U.S. 175, 185, 209 USPQ (BNA) 1, 7

Art Unit: 3624

(1981). However, courts have found that even if an invention incorporates abstract ideas, such as mathematical algorithms, the invention may nevertheless be statutory subject matter if the invention as a whole produces a "useful, concrete and tangible result." See State Street Bank & Trust Co. v. Signature Financial Group, Inc. 149 F.3d 1368, 1973, 47 USPQ2d (BNA) 1596 (Fed. Cir. 1998).

This "two prong" test was evident when the Court of Customs and Patent Appeals (CCPA) decided an appeal from the Board of Patent Appeals and Interferences (BPAI). See In re Toma, 197 USPQ (BNA) 852 (CCPA 1978). In Toma, the court held that the recited mathematical algorithm did not render the claim as a whole non-statutory using the Freeman-Walter-Abele test as applied to Gottschalk v. Benson, 409 U.S. 63, 175 USPQ (BNA) 673 (1972). Additionally, the court decided separately on the issue of the "technological arts". The court developed a "technological arts" analysis:

The "technological" or "useful" arts inquiry must focus on whether the claimed subject matter...is statutory, not on whether the product of the claimed subject matter...is statutory, not on whether the prior art which the claimed subject matter purports to replace...is statutory, and not on whether the claimed subject matter is presently perceived to be an improvement over the prior art, e.g., whether it "enhances" the operation of a machine. In re Toma at 857.

In Toma, the claimed invention was a computer program for translating a source human language (e.g., Russian) into a target human language (e.g., English). The court found that the claimed computer implemented process was within the "technological art" because the

Art Unit: 3624

claimed invention was an operation being performed by a computer within a computer.

The decision in State Street Bank & Trust Co. v. Signature Financial Group, Inc. never addressed this prong of the test. In State Street Bank & Trust Co., the court found that the "mathematical exception" using the Freeman-Walter-Abele test has little, if any, application to determining the presence of statutory subject matter but rather, statutory subject matter should be based on whether the operation produces a "useful, concrete and tangible result". See State Street Bank & Trust Co. at 1374. Furthermore, the court found that there was no "business method exception" since the court decisions that purported to create such exceptions were based on novelty or lack of enablement issues and not on statutory grounds. Therefore, the court held that "[w]hether the patent's claims are too broad to be patentable is not to be judged under °101, but rather under \$\$102, 103 and 112." See State Street Bank & Trust Co. at 1377. Both of these analysis goes towards whether the claimed invention is non-statutory because of the presence of an abstract idea. Indeed, State Street abolished the Freeman-Walter-Abele test used in Toma. However, State Street never addressed the second part of the analysis, i.e., the "technological arts" test established in Toma because the invention in State Street (i.e., a computerized system for determining the year-end income, expense, and capital gain or loss for the portfolio) was already determined to be within the technological arts under the Toma test. This dichotomy has been recently acknowledged by the Board of Patent Appeals and Interferences (BPAI) in affirming a \$101 rejection finding

Art Unit: 3624

the claimed invention to be non-statutory. See Ex parte Bowman, 61 USPQ2d (BNA) 1669 (BdPatApp&Int 2001).

In the present application, Claims 126 and 127 have no connection to the technological arts. None of the steps indicate any connection to a computer or technology. The step of determining and setting are broadly interpreted as being manual steps. Therefore, the claims are directed towards non-statutory subject matter. To overcome this rejection the Examiner recommends that Applicant amend the claims to better clarify which of the steps are being performed within the technological arts, such as having the setting of the closing time (step (b)) performed by a computer. Note also that such amendment must find support in the specification.

#### Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to JAGDISH PATEL whose telephone number is (703)308-7837. The examiner can normally be reached on 800AM-600PM M-Th.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Vincent Millin can be reached on (703)308-1065. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
